

MEMO

TO: CCLS Clients
FROM: Centracare Laboratories
DATE: November 10, 2022
SUBJECT: RSV Testing Update

RSV antigen testing, RSV (LAB0205724), performed at CentraCare locations is suitable for the pediatric population (less than 19 years of age) only. Performance characteristics have not been established for use with patients older than 19 years of age and for immunocompromised patients. Please use this information to guide appropriate test orders.

Effective November 10, 2022, a comment was added to RSV testing done on patients ≥ 19 years of age.

“This test is suitable for the pediatric population (less than 19 years of age) only. Performance characteristics have not been established for use with patients older than 19 years of age and for immunocompromised patients.”

Please feel free to contact your laboratory location with any questions.
